

# RGL7

## SHOCK ABSORBER

### RGL7

The RGL7 is a standalone shock absorber pack. It is commonly used to attach a EN 354 lanyard up to a maximum length of 2m. It can also be used as an absorber without adding an additional lanyard.

When used as an absorber on its own, the maximum user weight may be increased to 140kg as the free fall distance is reduced. Ensure compatibility of performance and maximum user weight with the additional equipment being used.

If used with a rope grab without extending its length, it ensures the user is distanced from the rope during work, freeing up the working area and also ensuring the rope is protected from sharp tools.

The shock absorber is a durable pouch which protects the energy absorbing webbing from abrasion or contaminants. The pouch has a zipped opening which is accessible for any routine inspections. A range of steel or aluminium connectors are available.

#### EN 355:2002

Material:	Polyester
Fittings:	Any compatible EN 362 connectors (not included)
Max arrest force:	<6kN
Length(s):	0.3m (excluding connectors)
