

# RGK22

## 22MM TRIPLE ACTION ALUMINIUM KARABINER RGK22

The RGK22 is a lightweight aluminium karabiner which offers enhanced safety through a triple-locking mechanism.

The triple action closure on this device has a three step process for opening, helping to prevent accidental opening. Making this karabiner a great asset for fall protection.

The asymmetrical shape of this karabiner has a wider top, offering a better fit which doesn't bunch up when connecting to a shock absorber pack.

The low weight of this karabiner makes climbing less strenuous and makes it easier to carry larger quantities when needed.

Ideal for industrial safety when working at height with a fall arrest system or for rescue operations where quick and secure attachments are needed.

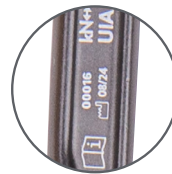

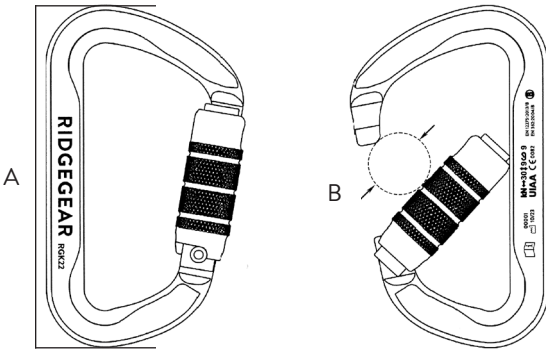

Each karabiner is supplied with an unique serial number for complete traceability and inspection control.

EN 362:2004

EN 12275:2013

Material:	Aluminium
Plating:	Anodised
Gate opening (B):	22mm
External length (A):	117mm
Closure type:	Triple action
MBS:	30kN
Weight:	84g

### FEATURES

Individual serial numbers

Anti-snag design
